

Protecting your Employees and Customers

OPTIONAL ONGOING SERVICE

Following the initial BioScrub™/MC Deep Cleaning Process, the Probiotic spray coating can be applied as a “refresher” every 24 to 48 hours to ensure that ongoing cleanliness levels are maintained. This can be done in the cart corrals or in the storage area in the Store and will help extend the need to do a re-cleaning, utilizing the BioScrub™/MC Process on the carts for up to 14 days.

KEEPING YOU PROTECTED

Shopping Carts can be a breeding ground for microorganisms such as Bacteria and Viruses that create an invisible Biofilm on the surfaces. In efforts to reduce the spread of these Bacteria and Viruses that can live on Shopping Carts it is necessary to perform a regular deep cleaning.

The BioScrub™/MC Process is a Deep Cleaning Methodology that is unique and effective in cleaning and decontaminating the surfaces using an all-natural and environmentally friendly Probiotic based process. Taking these crucial steps for your Store will provide an ongoing, high level of cleanliness, helping to protect your Employees and Customers alike, giving everyone that extra layer of reassurance and peace of mind.

THE BIOSCRUB PROCESS

Our innovative and proprietary BioScrub™/MC Process allows Grocery Shopping Carts to receive the highest quality of cleaning available.

The BioScrub™/MC Process uses a Foaming Solution of Probiotic to completely cover the shopping carts, removing the Biofilm that is made up of “bad” microorganisms including Bacteria and Viruses that accumulate and build up on an ongoing basis over time.

After the Probiotic has done its job to disrupt the invisible Biofilm, a supersaturated high-pressure steam rinse at 250°F is applied, washing away the disrupted Biofilm and all contaminants that are left behind. Once the rinse is completed and the carts have cooled a final coating of the Probiotic is applied as part of our final BioScrub™/MC Process. This provides added protection to reduce the recontamination from Bacteria or Viruses for an extended period of time compared to traditional chemical cleaning.
